WINTER SAFETY

WINTER SAFETY TIPS: DON'T WAIT, TAKE ACTION!

- Seek shelter in warm spaces
- Layer clothing
- Avoid cotton (Use synthetic fabrics that wick moisture from your skin and dry quickly)
- Wear an outer layer that is water repellent and hooded
- Wear a hat (40% of body heat can be lost from our heads)
- Cover your mouth to protect your lungs from extreme cold
- Wear mittens or gloves, snug at the wrist (mittens are better than gloves)
- Stay dry and out of the wind
- Stay hydrated and consume warm liquids
- Know emergency contact location
- Utilize public spaces
- Carry emergency supplies
- Know how to get help
- Be aware of early signs of cold-related illnesses

HYPOTHERMIA

Hypothermia is a medical emergency and immediate medical care is necessary.

SIGNS + SYMPTOMS

- Shivering and confusion
- Exhaustion, drowsiness or feeling very tired
- Memory loss and slurred speech
- Signs in babies: bright red, cold skin, and very low energy

HELPING THOSE WHO MAY BE HYPOTHERMIC

- Get the person into a warm room or shelter.
- Remove any wet clothing the person is wearing.
- Warm the center of the person's body—chest, neck, head, and groin—using an electric blanket, if available. You can also use skin-to-skin contact under loose, dry layers of blankets, clothing, towels, or sheets.
- Warm drinks can help increase body temperature, but do not give alcoholic drinks. Do not try to give beverages to an unconscious person.
- After body temperature has increased, keep the person dry and wrap their body, including their head and neck, in a warm blanket.
- Get the person proper medical attention as soon as possible.

WINTER SAFETY

FROSTBITE

A person who has frostbite may not know they have it until someone else points it out because the frozen parts of their body are numb.

SIGNS + SYMPTOMS

- Redness or pain in any skin area
- A white or grayish-yellow skin area
- Skin that feels unusually firm or waxy
- Numbness

HELPING THOSE WHO MAY HAVE FROSTBITE

- Get the person into a warm room as soon as possible.
- Unless necessary, do not walk on feet or toes that show signs of frostbite—this increases the damage.
- Do not rub the frostbitten area with snow or massage it at all. This can cause more damage.
- Put the areas affected by frostbite in warm—not hot—water (the temperature should be comfortable to the touch for unaffected parts of the body).
- If warm water is not available, warm the affected area using body heat. For example, you can use the heat of an armpit to warm frostbitten fingers.
- Do not use a heating pad, heat lamp, or the heat of a stove, fireplace, or radiator for warming. Affected areas are numb and can easily burn.
- Get the person proper medical attention as soon as possible.
